Hepatitis C Treatment: Week 8 Liver Function Test Results

August 1, 2015 By Greg Jefferys

31st July 2015

These test results below show my liver enzymes from September 2014 through to day. As you will see, after 8 weeks of treatment with generic Sofosbuvir and Ribavirin all my liver levels are perfect, they could not be better and I am stoked.

I wish that by this time next year that everyone with Hep C could access the new generation of Anti-viral drugs, whether through a government health program, a health insurance policy or by buying Indian generics.

Of course I know this is a dream because even the Indian generics are too expensive for most people in many countries to be able to afford.

It saddens me.
