3 Philly Dental Offices Shut Down Amid HIV and Hepatitis Risks

But health officials believe the risk of infection from improperly sterilized equipment is low.

March 29, 2019 By Trent Straube

Three dental clinics in Philadelphia have been closed because of improper sterilization of equipment and failure to follow proper injection safety procedures. These lapses could put patients at risk for HIV and hepatitis B and C.

The closings were announced by the Philadelphia Department of Public Health, in coordination with the Pennsylvania Department of State. All three practices were Trieu Family Dental Clinics. The locations include:

437 West Chew Avenue

5427 North Fifth Street

6536 Woodland Avenue

The health department recommends that anyone who visited the clinics between January 1, 2017, and December 7, 2018, be tested for HIV and hepatitis B and C. If clients don't have a regular health care provider, they can call a hot line at 215-218-2999 for information about testing.

"The Health Department believes the risk of infection to be low," states the press release, adding that it "is not aware of any infections as a result of these unsafe practices."

The health department investigators visited the clinics after receiving an anonymous tip. The clinics were shut down on December 7, 2018, and will not be allowed to reopen until they've demonstrated that all their procedures are safe.
