

“Act Now” for Global Fatty Liver Day 2026

Health organizations around the world advocate for better education, care and research surrounding fatty liver disease.

June 15, 2026 By Eva Lorenz

Last Thursday, June 11, health organizations around the world took to [social media](#) to celebrate [Global Fatty Liver Day](#), a public education campaign that brings attention to the most common chronic [liver](#) condition worldwide. Led since its launch in 2018, by the Global Liver Institute (GLI), the campaign builds on the [World Health Organization’s \(WHO\) recognition last month of fatty, or steatotic, liver disease as a major public health issue](#).

GLI kicked off Global Fatty Liver Day on social media with a multilingual post that read:

“Today is Global [#FattyLiverDay](#)!

Join us and our partners around the world as we raise [awareness](#) about steatotic (fatty) [#liverdisease](#), one of the most common [#liver](#) conditions worldwide.

This year’s message is simple: Act now. Screen early. Protect your liver.

[Fatty liver diseases](#) are caused by fat accumulation in the liver, or hepatic [steatosis](#). [Metabolic dysfunction-associated steatotic liver disease \(MASLD\)](#), formerly called non-alcoholic fatty liver disease, or NAFLD) and its more severe form, [metabolic dysfunction associated steatohepatitis \(MASH\)](#), formerly called non-alcoholic steatohepatitis, or NASH), are responsible for a growing proportion of [advanced liver disease](#) worldwide. Over time, the buildup of fat in the liver can lead to serious complications, including [cirrhosis](#) and [liver cancer](#).

[Around a third](#) of people in the United States have MASLD, and about 5% have MASH. By 2030, GLI estimates [358 million people](#) will be living with fatty liver disease worldwide. Fatty liver disease often occurs in people with [obesity](#), [type 2 diabetes](#) and other metabolic conditions. With only two approved medications ([Rezdiffra](#) and [Wegovy](#)), management still largely depends on lifestyle changes such as [weight loss](#) and [exercise](#).

“Act Now” is the theme of this year’s awareness day, which asks patients, [healthcare providers](#), researchers and policymakers to improve [prevention](#), [early detection](#) and [healthcare access](#) regarding fatty liver disease. Screening and educational events took place worldwide, including [Liver Disease News](#):

“Most people with steatotic (fatty) liver disease don’t know they have it.

Steatotic (fatty) liver disease is now one of the most common chronic liver conditions worldwide, yet millions remain undiagnosed until serious liver damage has already occurred.

This Global Fatty Liver Day, we’re proud to partner with the Global Liver Institute and the Fatty Liver Foundation to help raise awareness about the importance of early detection, education, and access to care.

Swipe through to hear why awareness matters from leaders working to improve outcomes for people living with liver disease.

The nonprofit [American Liver Foundation](#) held a conversation about liver health using its giant inflatable liver as a teaching tool.

“It’s time to focus on your liver!

Join Madrigal on Global Fatty Liver Day for their “MASH Across America” launch in Philly on June 11th. Tour their giant inflatable liver and learn about liver health.

The event will be held at the Fairmount Park Horticulture Center, 100 N. Horticultural Dr, Philadelphia, PA 19131, from 10am-2pm.

The [European Liver Patient Association](#) held liver screenings at two locations in Munster, Germany, leading up to the event, a part of the group’s European Liver Screening Tour.

"GLOBAL FATTY LIVER DAY

Today, the [#EuropeanLiverScreeningTour](#) by ELPA in Münster, bringing liver health directly to the people through screening activities at two locations across the city.

Your liver works silently every day to keep you healthy. Yet millions of people are living with fatty liver disease without knowing it.

[#MASLD](#), [#Obesity](#) and type 2 [#diabetes](#) significantly increase the risk of [#cardiovascular](#) disease and livercancer.

But there is hope.

Early detection saves lives.

Prevention starts with awareness.

A simple screening can make a life-changing difference.

Today, we invite everyone in Münster to take a moment for their health.

Know your risk.

Get screened.

Protect your liver.

Protect your heart.

Protect your future.

Together, we are building a future where liver disease is detected earlier, treated better, and prevented whenever possible."
