

Trump Team's Planned ACA Rule Offers Its Answer to Rising Premium Costs: Catastrophic Coverage

Health care coverage and affordability have become politically potent issues in the run-up to November's midterm elections.

February 16, 2026 By Julie Appleby and KFF Health News

The Trump administration has unveiled a [sweeping set of regulatory proposals](#) that would substantially change health plan offerings on the Affordable Care Act marketplace next year, aiming, it says, to provide more choice and lower premiums. But it also proposes sharply raising some annual out-of-pocket costs — to more than \$27,000 for one type of coverage — and [could cause up to 2 million](#) people to drop insurance.

The changes come as affordability is a key concern for many Americans, some of whom are struggling to pay their ACA premiums since enhanced subsidies expired at the end of last year. Initial enrollment numbers for this year [fell by more than 1 million](#).

Health care coverage and affordability have [become politically potent issues](#) in the run-up to November's midterm elections.

The proposed changes are part of a lengthy rule that addresses a broad swath of standards, including benefit packages, out-of-pocket costs, and health care provider networks. Insurers refer to these standards when setting premium rates for the coming year.

After a comment period, the rule will be finalized this spring.

It “puts patients, taxpayers, and states first by lowering costs and reinforcing accountability for taxpayer dollars,” said Centers for Medicare & Medicaid Services Administrator Mehmet Oz [in a February 9 press release](#).

One way it would do so focuses heavily on a type of coverage — [catastrophic plans](#) — that last year attracted only about 20,000 policyholders, [according to the proposal](#), although [other estimates](#) put it closer to 54,000.

“To me, this proposal reads like the administration has found their next big thing in the

catastrophic plans,” said Katie Keith, director of the Health Policy and the Law Initiative at the O’Neill Institute for National and Global Health Law at Georgetown University Law Center.

Such plans have very high annual out-of-pocket costs for the policyholder but often lower premiums than other ACA coverage options. Formerly restricted to those under age 30 or facing certain hardships, the Trump administration allowed older people who lost subsidy eligibility to enroll in them for this year. It is not yet known how many people chose to do so.

The payment rule cements this move by making eligible anyone whose income is below the poverty line (\$15,650 for this year) and those earning more than 2.5 times that amount who lost access to an ACA subsidy that lowered their out-of-pocket costs. It also notes that a person meeting these standards would be eligible in any state — an important point because this coverage is [currently available](#) in only 36 states and the District of Columbia.

In addition, the proposal would require out-of-pocket maximums on such plans to hit \$15,600 a year for an individual and \$27,600 for a family, [Keith wrote this week in Health Affairs](#). (The current out-of-pocket max for catastrophic plans is \$10,600 for an individual plan and \$21,200 for family coverage.) Not counting preventive care and three covered primary care doctor visits, that spending target must be met before a policy’s other coverage kicks in.

In the rule, the administration wrote that the proposed changes would help differentiate catastrophic from “bronze” plans, the next level up, and, possibly, spur more enrollment in the former. Currently, the proposal said, there may not be a significant difference if premiums are similar. Raising the out-of-pocket maximum for catastrophic plans to those levels would create that difference, the proposal said.

“When there is such a clear difference, the healthier consumers that are generally eligible and best suited to enroll in catastrophic plans are more motivated to select a catastrophic plan in lieu of a bronze plan,” the proposal noted.

However, ACA subsidies cannot be used toward catastrophic premiums, which could limit shoppers’ interest.

Enrollment in bronze plans, which currently have an average annual deductible of \$7,500, has doubled since 2018 to about 5.4 million last year. This year, that number will likely be higher. Some states’ sign-up data indicates a shift toward bronze as consumers left higher-premium “silver,” “gold,” or “platinum” plans following the expiration of more generous subsidies at the end of last year.

The proposal also would allow insurers to offer bronze plans with cost-sharing rates that exceed what the ACA law currently allows, but only if that insurer also sells other bronze plans with lower cost-sharing levels.

In what it calls a “novel” approach, the proposal would allow insurers to offer multiyear catastrophic plans, in which people could stay enrolled for up to 10 years, and their out-of-pocket

maximums would vary over that time. Costs might be higher, for example, in the early years, then fall the longer the policy is in place. The proposal specifically asks for comments on how such a plan could be structured and what effect multiyear plans might have on the overall market.

“As we understand it thus far, insurers could offer the policy for one year or for consecutive years, up to 10 years,” said Zach Sherman, managing director for coverage policy and program design at HMA, also known as Health Management Associates, a health policy consulting firm that does work for states and insurance plans. “But the details on how that would work, we are still unpacking.”

Matthew Fiedler, senior fellow with the Center on Health Policy at the Brookings Institution, said the proposed rule included a lot of provisions that could “expose enrollees to much higher out-of-pocket costs.”

In addition to the planned changes to bronze and catastrophic plans, he points to another provision that would allow plans to be sold on the ACA exchange that have no set health care provider networks. In other words, the insurer has not contracted with specific doctors and hospitals to accept their coverage. Instead, such plans would pay medical providers a set amount toward medical services, possibly a flat fee or a percentage of what Medicare pays, for example. The rule says insurers would need to ensure “access to a range of providers” willing to accept such amounts as payment in full.

Policyholders might be on the hook for unexpected expenses, however, if a clinician or facility doesn’t agree and charges the patient the difference.

Because the rule is so sweeping — with many other parts — it is expected to draw hundreds, if not thousands, of comments between now and early March.

Pennsylvania insurance broker Joshua Brooker said one change he would like to see is requiring insurers that sell the very high out-of-pocket catastrophic plans to offer other catastrophic plans with lower annual maximums.

Overall, though, a wider range of options might appeal to people on both ends of the income scale, he said.

Some wealthier enrollees, especially those who no longer qualify for any ACA premium subsidies, would prefer a lower premium like those expected in catastrophic plans, and could just pay the bills up to that max, he said.

“They’re more worried about the half-million-dollar heart attack,” Brooker said. It’s tougher for people below the poverty level, who don’t qualify for ACA subsidies and, in [10 states, often don’t qualify for Medicaid](#). So they’re likely to go uninsured. At least a catastrophic plan, he said, might let them get some preventive care coverage and cap their exposure if they end up in a hospital. From there, they might qualify for charity care at the hospital to cover out-of-pocket costs.

Overall, “putting more options on the market doesn’t hurt, as long as it is disclosed properly and

the consumer understands it,” he said.
