Billy Graham Cured of Hepatitis C Through Sovaldi Treatment Regime!

June 3, 2017 By Devon Nicholson

Former WWE Champion and WWE Hall of Famer Class of 2004 “Superstar” Billy Graham has been declared “Cured” of Hepatitis C after a 25 year battle with the disease that caused him to have a liver transplant from a 24 year old girl who passed away from a car accident in 2002. Graham underwent the new Sovaldi treatment regime that included oral drugs Sovaldi, Ribavirin and Daklinza for 3 months in 2016 and was declared “Cured” after the virus was still undetectable in his blood 6 months post treatment in the spring of 2017! A huge congratulations to him for slaying the Hep C dragon!

Here are some earlier challenges documented along Billy’s journey:
