

# Hepatitis C Treatment: Week 8 Liver Function Test Results

August 1, 2015 By [Greg Jefferys](#)

---

## 31st July 2015

These test results below show my liver enzymes from September 2014 through to day. As you will see, after 8 weeks of treatment with generic Sofosbuvir and Ribavirin all my liver levels are perfect, they could not be better and I am stoked.

I wish that by this time next year that everyone with Hep C could access the new generation of Anti-viral drugs, whether through a government health program, a health insurance policy or by buying Indian generics.

Of course I know this is a dream because even the Indian generics are too expensive for most people in many countries to be able to afford.

It saddens me.
