Indian Sofosbuvir Combined with Mesochem Daclatasvir

September 8, 2015 By Greg Jefferys

8th September 2015

Here is an email I received yesterday from one of the first people to start using Indian Sofosbuvir combined with Mesochem Daclatasvir. He is a Cambodian student studying in Sydney whilst his father lives in Cambodia and was very sick with Hep C and had no hope of getting treatment there in Cambodia.

Hi Greg

Just an update from my dad in Cambodia. It is now week 6 since he took the med. He just went for a blood test last week and the results are marvelous. Apart from the difficulty to get to sleep (which is now getting better with some good diet), he said everything else is great - he is having more strength and can jog for hours! He told me to say thank you very much.

I told him to do another check probably at the end of week 8 (like what you did)...

Thanks for all the updates on the blog.

All the best,
